Chef's daily routine is very simple. He starts his day with cooking food, then he eats the food and finally proceeds for sleeping thus ending his day. Chef carries a robot as his personal assistant whose job is to log the activities of Chef at various instants during the day. **Today** it recorded activities that Chef was doing at N different instants. These instances are recorded in chronological order (in increasing order of time). This log is provided to you in form of a string s of length N , consisting of characters 'C', 'E' and 'S'. If $s[i] = 'C'$, then it means that at the i -th instant Chef was cooking, 'E' denoting he was eating and 'S' means he was sleeping.

You have to tell whether the record log made by the robot could possibly be correct or not.

Input

The first line of the input contains an integer T denoting the number of test cases. The description of T test cases follows.

The only line of each test case contains string s .

Output

For each test case, output a single line containing "yes" or "no" (without quotes) accordingly.

Constraints

- $1 \leq T \leq 20$
- $1 \leq N \leq 10^5$

Input :

5
CES
CS
CCC
SC
ECCC

Output :

yes
yes
yes
no
no

Explanation

Example case 1. "CES" can correspond to a possible record of activities of Chef. He starts the day with cooking, then eating and then sleeping.

Example case 2. "CS" can also correspond to a possible record of activities of Chef. He starts the day with cooking, then eating and then sleeping. Robot recorded his cooking and sleeping in order. He might not have recorded his eating activity.

Example case 4. "SC" can not correspond to Chef's activities. Here it means that Chef slept first, then he cooked the food, which is impossible for Chef to do on some particular day.

CodeChef is a non-commercial competitive programming community.

CodeChef - A Platform for Aspiring Programmers

CodeChef was created as a platform to help programmers make it big in the world of algorithms, **computer programming** and **programming contests**. At CodeChef we work hard to revive the geek in you by hosting a **programming contest** at the start of the month and another smaller programming challenge in the middle of the month. We also aim to have training sessions and discussions related to **algorithms**, **binary search**, technicalities like **array size** and the likes. Apart from providing a platform for **programming competitions**, CodeChef also has various algorithm tutorials and forum discussions to help those who are new to the world of **computer programming**.

Practice Section - A Place to hone your 'Computer Programming Skills'

Try your hand at one of our many practice problems and submit your solution in a language of your choice. Our **programming contest** judge accepts solutions in over 35+ programming languages. Preparing for coding contests were never this much fun! Receive points, and move up through the CodeChef ranks. Use our practice section to better prepare yourself for the multiple **programming challenges** that take place through-out the month on CodeChef.

Compete - Monthly Programming Contests and Cook-offs

Here is where you can show off your **computer programming skills**. Take part in our 10 day long monthly coding contest and the shorter format Cook-off **coding contest**. Put yourself up for recognition and win great prizes. Our **programming contests** have prizes worth up to INR 20,000 (for Indian Community), \$700 (for Global Community) and lots more CodeChef goodies up for grabs.
