Chef is a well known programmer. He owns a brand new Android phone of screen size of dimension  $n \times m$  ( $n$  denotes the height of the phone and  $m$  denotes the width). Chef wants to design a program for painting the screen. He figured out  $c$  colors, which he will use to paint the screen. He wants to paint some rectangular section of pixels of the screen each with different color. Also Chef would like to use all of his  $c$  colors in painting.

Can you help Chef in finding number of different dimensions of rectangular section he can paint? In other words, find number of pairs  $x, y$  such that Chef can paint a rectangular section of dimension  $x \times y$  ( $x$  denotes height,  $y$  denotes width) on the screen. Please note that Chef uses a fix orientation of his phone and is not allowed to rotate it, i.e. height always stays  $n$  and width always stays  $m$  and not the other way around.

## Input

First line of the input contains an integer  $T$  denoting the number of test cases.  $T$  test cases follow.

Only line of each test case contains three space separated integers  $n, m, c$ .

## Output

For each test case, output a single line containing the answer for the test case.

## Constraints

- $1 \leq T \leq 100$
- $1 \leq n, m \leq 10^6$
- $1 \leq c \leq 10^6$

---

## Example

Input :

2  
4 6 12  
3 3 10

Output :

3  
0

---

## Explanation

**Test case 1.** Possible pairs of dimensions are **(2, 6)**, **(3, 4)** and **(4, 3)**. Note that the rectangular section of dimension **(1, 12)** can't be painted as it can't fit into the screen, because  $12 > 6$ .

**Test case 2.** There does not exist any rectangle of desired dimensions which can have 10 different pixels painted.

### CodeChef - A Platform for Aspiring Programmers

CodeChef was created as a platform to help programmers make it big in the world of algorithms, **computer programming** and **programming contests**. At CodeChef we work hard to revive the geek in you by hosting a **programming contest** at the start of the month and another smaller programming challenge in the middle of the month. We also aim

**Directi**  
Intelligent People. Uncommon Ideas.  
The time now is: 08:06:17 AM  
Your IP: 169.54.6.221

to have training sessions and discussions related to **algorithms**, **binary search**, technicalities like **array size** and the likes. Apart from providing a platform for **programming competitions**, CodeChef also has various algorithm tutorials and forum discussions to help those who are new to the world of **computer programming**.

**Practice Section - A Place to hone your 'Computer Programming Skills'**

Try your hand at one of our many practice problems and submit your solution in a language of your choice. Our **programming contest** judge accepts solutions in over 35+ programming languages. Preparing for coding contests were never this much fun! Receive points, and move up through the CodeChef ranks. Use our practice section to better prepare yourself for the multiple **programming challenges** that take place through-out the month on CodeChef.

**Compete - Monthly Programming Contests and Cook-offs**

Here is where you can show off your **computer programming skills**. Take part in our 10 day long monthly coding contest and the shorter format Cook-off **coding contest**. Put yourself up for recognition and win great prizes. Our **programming contests** have prizes worth up to INR 20,000 (for Indian Community), \$700 (for Global Community) and lots more CodeChef goodies up for grabs.
